## FROM THE RECTOR

Gone are the days, when the child would complete education in school, go to college and then choose a profession like Doctor, Engineer, C.A. etc. With the passage of time and with the unemployment increasing in our country and the world, offbeat careers are the order of the day. Add to it, the technological revolution that has taken place, which has resulted in so many tasks and duties being done online, and that has resulted in a big boom in offbeat careers.

What is an offbeat career? Offbeat careers can be defined as the equipping of oneself with relevant, evolving and out-of-the-box skills which can give the youngsters an opportunity to explore new career routes and give them the courage to pursue their interests. For those who don't enjoy the traditional work culture and who are daring and believe in doing something revolutionary and new, who aim to pursue their passion and make an impact, learning an offbeat skill could be exciting and rewarding. Some offbeat careers are Wine tester, Tea Taster, Chocolatier, Bartending, Pet Groomer, Fitness trainer, Creative writing, Event management, etc.

Some of the benefits of pursuing an offbeat career are:

1. Pursuing one's passions: Whether it is painting, dancing, writing or travelling, it is your passion that fuels your willingness to work, Mastery in an offbeat skill would help turn your interests, passions and dreams into reality.
2. Earning potential: Complications like delayed results, high costs of equipment and lower earnings in the initial years can act as a dampener, but once you build a name and get recognition, these offbeat careers can increase your earning potential tremendously. Some offbeat careers like photography and video game animators earn more in 2 to 5 months, than someone who would earn in a conventional career in 2 years.
3. Be your own Boss: You are the master of your career. You can choose when to work, how much to work and how to work. How much you earn, will determine on the time and effort you put in. You can work part time, full time or on contract basis.
4. Constant learning and progress: As we are dealing with technology, we are constantly upgrading ourselves as there are various updates and new developments that are taking place every second day.

There are so many offbeat careers that can be used to suit each one of us. Mainline careers like Doctors, Engineers, Lawyers, and Teachers etc will still be the main focus, but with these offbeat careers, there is a lot more that can be done to achieve success, satisfaction and peace of mind.

**Fr. James Nigrel  
(sdb Rector & Parish Priest)**

# FROM THE PRINCIPAL

## REFLECTING ON OFFBEAT CAREERS

I was reflecting this morning on a road I took when I was driving. I came across a fork in the road which was not the one everyone was going by, which made me think of Robert Frost's famous poem, [The Road Not Taken](#), and these lines in particular:

*Two roads diverged in a wood, and I—  
I took the one less travelled by,  
And that has made all the difference.*

That reflective day and this poem have been on my mind of late as I consider the choices and decisions I have made in my life and the ripple effect that followed. I have often taken the *less travelled path* and am grateful for the rich experiences, lessons learned and the wonderful people I have encountered along the way. I assure you I have not always made perfect choices, but by and large I feel a sense of contentment and appreciation for where my life is today. Do you ever reflect on the decisions you have made and the paths you have followed in life?

As I consider these important experiences and decisions from my past, some were complete directional changes with my career, some involved embracing new ways of living and some were profound mindset shifts.

When we have to choose a life career, we have popular choices, which may appear to be sensible, logical, offer worldly success or anything else you may think you want out of life. All of us probably remember growing up thinking our lives would follow a certain path.

The choice is between a safe career based on conventional thinking and what is best for you. We should be able to question the wisdom behind "one size fits all". Have confidence in what you feel, seek out the opinion of a wise person from your life. Live by your values and follow your moral compass. The easy and well-trodden path may not bring true fulfillment. It may lead to an ordinary life when you are made for something extraordinary. Be willing to question popular wisdom and make the choices that work best for you. Live the kind of life you wish to live.

Walking on popular roads may give you a feeling of success by the world's standard, but will leave you unfulfilled. Going on the road less travelled you will have a lot of difficulties and have obstacles to overcome, but will lead you to a life well lived. If given a second opportunity I would not trade it for any other life.

*I chose to walk on the road less travelled and that has made all the difference...*

**Fr. Blaise Fernandes  
(sdb Principal & Parish Priest)**

# TREADING THE PASSION PATH

Whether painting, dancing, writing, scripting, anchoring, or travelling, passion fuels your willingness to work. Mastery in an offbeat skill would help you turn your interests, passions, and dreams into reality. While working professionally in the field of your choice, you stay motivated, continue learning, experience a sense of accomplishment, feel positive and energetic, broaden your horizons, and constantly discover new career opportunities.

For those with multiple interests or hobbies, you must first assess your strengths and weaknesses and the

opportunities and threats of building a career in those fields. This will help you to determine your capabilities, make the right decisions, and stay focussed, consistent, innovative, and dedicated towards your career.

Offbeat career choices like animation, photography, video editing, blogging, digital art, calligraphy, playing guitar, or creative writing feature a great scope for networking.

Pursuing a career in an offbeat skill is thus an excellent way to meet new people, showcase your ability to the world, make lasting connections, and grow profoundly. You would be constantly eager to learn and acquire more knowledge, discover new techniques of working, compete passionately, and grow in your career.

Every career track offers a generous way to climb a success.

**Ms. Flavia Vishwanathan**  
**Secondary Teacher**  
**(Chief Editor)**

## WHAT LIES INSIDE YOU

In this world of struggle, to gain the ultimate power, we all sometimes forget an important quality in us - 'Our inner worth'.

Various ways to explore our inner worth are as follows:-

### 1. Maintain Positive Self-esteem

Be comfortable with who you are. Don't feel as if you're being judged by your looks. Try to change the situation into a chance to make a favourable circumstance.

### 2. Recognise the Difference You Make

Always try to gain the potential to contribute on a huge scale. Avoid running after quantity but focus more on quality.

### 3. See Yourself as a Peer

Have a personal sense of value and nurture and elevate the best in yourself. Never shy away from giving yourself a second chance.

### 4. Know where you deserve to be

It's always better to be in a place in which you're valued the most.

*By Dhruv Wasan IX B*

## FINDING YOUR PASSION IS THE KEY TO YOUR SUCCESS

Once you find your passion nothing will be hard in life. You start pushing yourself hard until you have achieved your mark. In today's world if someone gives up on their passion and does something they don't like under the pressure of their family then this leads to anxiety, depression, etc. It's never too late to find your passion no matter how old you are. You can become successful without following your passion, but ask yourself once! Will I be happy with a 9 to 5 job? So let's follow the path of passion and give ourselves a chance! What if Sachin Tendulkar's father had told him to become a singer or Lata Mangeshkar's father forced her to become a cricketer, would they have ever reached the platform they currently are on? *So, think before giving up on your passion.*

*Moin Khan, X B*

## ROLE OF THE

## IN SHAPING INDIA'S FUTURE

The spring of life is the period between childhood and adulthood. Youth are the most dynamic and important segment of any nation's population. The youth has the power to transform the nation into a better place through discovery and dreams. Our youth are tomorrow's innovators, creators, builders, and leaders, and we can indisputably say that. They fight for an identity in society, equality, justice, homelessness, unemployment, exploitation and poverty. There is a greater sense of responsibility among youth towards their own country now. It is imperative that we learn from yesterday and live with hope for a better tomorrow. It is from our past that we can learn how the young warriors sacrificed for the country.

*Spandan Jadhav, IVA*

## **FREE TO CHOOSE MY OWN WAY**

Oscar Wilde quoted, "The best way to make children good is to make them happy" and that can be materialized only when they are free to choose their own way. Children must be taught how to think not what to think.

'It is easier to build strong children than to repair broken men', said Douglass. This only with freedom has found that their children more autonomy discovered they did better emotionally.

Such children can explore the world and harness their inner talents and fulfil their dreams. We have a zillion examples of such free young achievers. For Eg. - Renowned youtuber Ranveer Allahabadi, son of leading, senior gynaecologist Dr.Swati Allahabadi and even popular actor R. Madhavan's son Vedaant Madhavan who is a national swimming champ, etc. But since children are innocent and vulnerable, their liberties must be restricted in order to ensure their security and wellbeing.

**Abhinav Rai IX A**

## **SUCCESS DOESN'T COME TO YOU, YOU GO TO IT!**

Success is indeed a broad term. In simple words it means achieving any desired aim. It is a destination which one can reach only by working hard, following passion, being disciplined and consistent. When we try to reach this destination, sometimes we fail but remember 'Failure is the mother of Success and Success is the fruit of hard work'. So don't get disheartened about your failure, accept it and work hard for your future. When Burj Khalifa was being built, it faced several failures like bursting of glass panels, freezing of concrete at a height, etc. But after six years of consistent hard work and patience, Burj Khalifa is a major success with a turnover equal to its building cost in every nine months. It takes time to reach this destination but don't worry and move ahead as 'Great things take time'.

**Dhruv Sosa, XA**

## **TODAY'S YOUTH, TOMORROW'S FUTURE**

Youth are the foundation of a future rebel, a social doctor, and the owners of tomorrow, who can design a better society. It is true that the youth play a vital role in shaping society from generation to generation. The youth of today will be the policymakers who will guide our society, and they will be the parents who will raise the next generation. Taking care of your country is one of your responsibilities as a young person. Young people are the backbone of a nation and can shape the future of a nation by demonstrating values and being courageous.

Young people must do everything they can to use their precious time wisely, as time is precious and the waste of it is a great loss for the future. We often see young people wasting their time unnecessarily. As today's youth are the only hope for tomorrow, every moment of their lives is important.

I believe that the future success of a nation lies in the hands of the young generation of today. A strong foundation is necessary for a strong building, so if young people have strong values, the best education, good health, and the right priorities, then the future is bright.

**Pavitra Bandkar, IVB**

## **TODAY'S YOUTH – DIFFERENT TYPES OF CAREER**

Career is very important for all of us. Whatever career path you choose to follow will impact your life greatly. Your career will define your status in society in addition to your lifestyle. Therefore, it is extremely important to choose the correct career path.

Today's youth's beliefs and goals differ from their parents and ancestors. Our parents may want us to be a doctor or engineer but we should strive for our dream job may it be a painter, You Tubers, photographers, etc. We don't want our parents to be dissatisfied but we mustn't give up on our dreams and aspirations too.

There are many opportunities like social media influencers, Digital market, and many more! We have a strong feeling of sticking to the old-fashioned and traditional ways but it is fine to be different and stand out from the crowd because, in the end, our happiness is all that matters.

**Sharvil Mohite , VIII B**

## **LEARNING NEVER EXHAUSTS THE MIND**

The best thing that God gifted you is your mind, it is a great asset. Your mind has infinite space and capacity where new ideas, concepts and skills can be generated and stored. It is the greatest human feature that never gets exhausted from learning new things. The more knowledge it gets the sharper it becomes. New ideas and concepts generate from our mind and make us creative thinkers and learners. It is very much necessary that we should channelize our mind in the right direction in order to get the best output. The more we utilize our mind for innovative things, the more it grows and develops.

The possibilities of development of our mind are endless, hence, the saying by Leonardo da Vinci – “Learning never exhausts the mind” makes perfect sense.

Take care of your mind and learn as much as you can!

**Vedant Sawant VII A**

## **“EDUCATION IS KINDLING OF A FLAME, NOT FILLING A VESSEL”**

A flame once kindled expands greatly in shape and size while a vessel is of fixed shape and size and can store a limited amount.

If education is restricted to only filling students minds with known facts, data, information and thesis we would have a society of programmed machines. There won't be free thinking individuals. We would lack innovations and experiments.

Education ignites minds. It gives powers to think of various aspects of a same thing, brings curiosity to know more. Growth in any area is possible when there is continuous change happening around it. Education is the means, not the end, which facilitates people to bring changes constantly by thinking in multiple directions, so that we look at things beyond our horizon.

**Amogh Dalvi, VII B**

## **THRILL OF**

Change is the law of nature. From the Industrial Revolution 1 to 4 we witnessed dramatic change in every sphere of life. All the 4 revolutions used various methods to change our lives. The advancement of technology in the field of artificial intelligence, coding and robotics too has changed the lifestyle of mankind. These changes have brought changes in people's needs, attitudes, knowledge, skills and competencies. As a result, new occupations and careers have evolved of late. These careers are called offbeat careers.

These offbeat careers are unconventional and different from mainstream or traditional options. These offbeat career paths look lucrative for the big dreamers of the current generation. Some interesting careers which are paved by the passion of the out-of-the-box thinkers are Cartoonist, Calligrapher, System Analyst, Flavorist, Blogging, Animation, Pet Groomers, Fitness experts, Travel Planners, Dance Instructor, Skin care specialists, Athletes trainers, Ethical hackers and the list is endless.

**Hiten Patil VIII A**

## **“BETTER TOMORROW”**

Nobody can go back and start a new beginning, but anyone can start today and make a new ending. Learn from yesterday, live for today and hope for tomorrow.

Tomorrow is too late, yesterday is over and now is the exact moment that you should start. The best preparation for tomorrow is doing your best today, so always work hard for a better tomorrow.

You can't have a better tomorrow, if you are thinking about yesterday all the time. Let us sacrifice today, so we have a better tomorrow. Always hope for a better tomorrow, cause with no hope, there's no life.

**Gaurang Brahmankar, VIA**

## **MOVING STEP BY STEP INTO THE REAL WORLD**

"What lies behind us and what lies ahead of us are tiny matters to what lies within us \_ Ralph Waldo Emerson. A child is protected in the mother's womb until he is born .This is his first step into the real world, he has to face problems we may not know. Similarly when we move from school to college our journey begins to the real outside world, which is full of different kinds of people, challenges and obstacles that we have to face individually. At this stage one may tend to lose confidence unless he has strong willpower and determination to overcome all the difficult situations he goes through.

The real world is gender biased, in order to deal with it, we need to interact with the opposite gender so that we can deal with it without hurting one another. Every failure in life is a step towards success, don't give up! It is truly said" where there is a will there's a way". So first believe in yourself and build up your self-confidence.

Do not get carried away by the world's fascination. What you see and hear about others may not be true. One should not judge a book by its cover page. We need to be vigilant, listen carefully, understand the depth of the story or situation and then take a step forward, so that you can hold your foot firm in the real world. To achieve this you must have strong faith in God and determination to overcome every situation you come across.

Always remember "I can and I will ".

**Tr. Smita Lewis**  
**Primary Teacher**

## **THE CHALLENGES FACED BY THE EDUCATED YOUTH TODAY**

The spring of life is the period between childhood and adulthood. Youth are the most dynamic and important segment of any nation's population. The youth has the power to transform the nation into a better place through discovery and dreams. Our youth are tomorrow's innovators, creators, builders, and leaders, and we can indisputably say that. They fight for an identity in society, equality, justice, homelessness, unemployment, exploitation and poverty. There is a greater sense of responsibility among youth towards their own country now. It is imperative that we learn from yesterday and live with hope for a better tomorrow. It is from our past that we can learn how the young warriors sacrificed for the country.

**Swarnim Nagarkar, VB**

## **EDUCATED YOUTH - REMODELLING THE FUTURE**

India has 315 million young people aged between 10-24 years, which is 30 percent of the country's population. Many of the studies say that they are healthier, more urbanized, and better educated than earlier generations. Among them, nearly 70 percent are literate. Some say, India's youth have a very unique advantage, a combination of mobility, language, education, a thirst for knowledge and a technology-savvy nature, qualities that will drive the nation's growth, in the coming years. Different training programmes can be carried out to develop leadership among the youth. Life skills, adolescent health and information on different government services for youth are the major components of the activity. Various training programmes can be organized and useful friendly materials can be distributed among the youth, so that they can get better education on these issues. This can enhance the knowledge of the youth and they can become empowered to take decisions in various aspects of their life.

*"We cannot always build the future for our Youth, but we can build our Youth for the future".*

## **HEADLINE: OFFBEAT: THE CAREER YOUR HEART BEATS FOR...**

If you have always dreamt of giving an engaging match commentary from the fan-filled stadium, interviewing your favourite celebrity, sharing reviews for the food you just munched, or capturing picturesque moments on camera, then the world is waiting to embrace your passion as you can encash by making it your profession.

Not just are teachers, doctors or engineers careers to choose, there are many more options that you can keep scrolling and swiping so that your decision sees you succeeding and smiling. Dubbing, mime art, stand-up comedy, gaming, journalism, travel and tourism, cooking, and a lot more can be your pick.

From the insights shared at Zero: An offbeat career fair conducted by the Rotaract Club of Lajpat Rai College, the advice by educational counsellors, and one's aptitude, one must step into a career that excites them and not merely encashes into pockets.

Why be cliché when you can be creative and risk-taking? Call it 'offbeat' career or the only field that your heart beats for, you must walk in the path that you identify to be yours and not chase that of others. Everyone has a special talent, some latent while some explored, and thus 'one size fits all' is not the ideal way to plan one's life.

In the times when even 'dreaming' can be a job, aim to make a career in the field you wish to explore and experience.

***Mrs. B. Nagaprabha, Supervisor  
(Secondary Section)***

## **CAREER PROSPECTS FOR BIOLOGY STUDENTS**

Plant science has a wide range of uses in sustaining human life and the environment.

With qualifications in botany, here are a few intriguing careers you can pursue.

**Plant Quarantine Specialist** - Inspection of consignments of plants, plant products and other regulated articles by plant quarantine officers to prevent the introduction or spread of pests into the country.

**Horticulturists** - Want to make the world a happier, more colorful place? Consider majoring in the interesting blend of art and science that is Landscape Horticulture, which is also a multi-billion dollar industry that involves the design, implementation, management, and conservation of urban and rural landscapes.

***Ms. Fahmida Khawaja  
(Secondary Teacher)***

## **ARTIFICIAL INTELLIGENCE IS THE FUTURE TECHNOLOGY**

Artificial Intelligence (AI) is the future technology of tomorrow. It's not a fad or hype and it's not going anywhere soon. AI is an integral part of our lives, but why should you care? AI is currently everywhere, from self-driving cars to Amazon Echo's voice assistant Alexa. AI can be used in many different ways:

- It could help you get better at your job or hobby by doing things like learning how to play chess or taking over the role of an AI robot instead of human workers in factories.
- It could also help us understand ourselves better through research into our own minds, such as how we make decisions or what drives our behaviour.

The primary goal of AI research is to build computers that can perform tasks better than people do, such as diagnosing diseases or recognizing spoken words. AI has the ability to learn, reason, plan, solve problems and make decisions based on information.

In the near future, AI will be able to predict and solve problems that we humans don't even know exist. It's already being used in many industries including healthcare, transportation and retail.

The technology is already being used by businesses across the world to make better decisions about their operations. AI can help companies reduce costs or increase revenue by automating tasks such as customer service or warehouse management, which requires human intervention at some point during its execution process.

The emergence of AI has created a new type of job market where skills previously considered "exclusive" are now accessible to anyone who has access to technology like smartphones or laptops; this has allowed people who never thought they could have careers before due to their lack of education or experience - especially women - enter into these fields with relative ease thanks largely due these advancements made possible through technological advancements like virtual reality headsets allowing us all access into an entirely new world i.e. **Metaverse** without leaving our homes!

***Mst.Guransh Singh***

***(Alumni)***

## **EDUCATION IS THE MOST POWERFUL WEAPON!!!**

My Mom always keeps saying, if you want brighter future and better world you need to educate yourself. But I never understood meaning of it. Today she bought me book of Dr. Nelson Mandela who says, 'Education is the most powerful weapon which you can use to change the world. 'Really? Can we change the world by just educating ourselves? And if it's better change then how education is weapon?

Just like Food, Clothing & Shelter is our necessity, today Education is the fourth most important necessity. Education empowers us to think, behave rationally which makes us the most advanced and developed species. An education allows us to communicate, share our ideas, understand different culture, learn about history, and hence give us chance to develop ourselves. Exchange of ideas help us to grow faster in all the aspect personal, professional etc. It is always seen Country growth is always proportional to percentage of educated people in that country. Education is weapon because it fights against superstitious ideas, illiteracy, poverty, inequality of gender, Casteism, violence against women etc. And hence help in building brighter world.

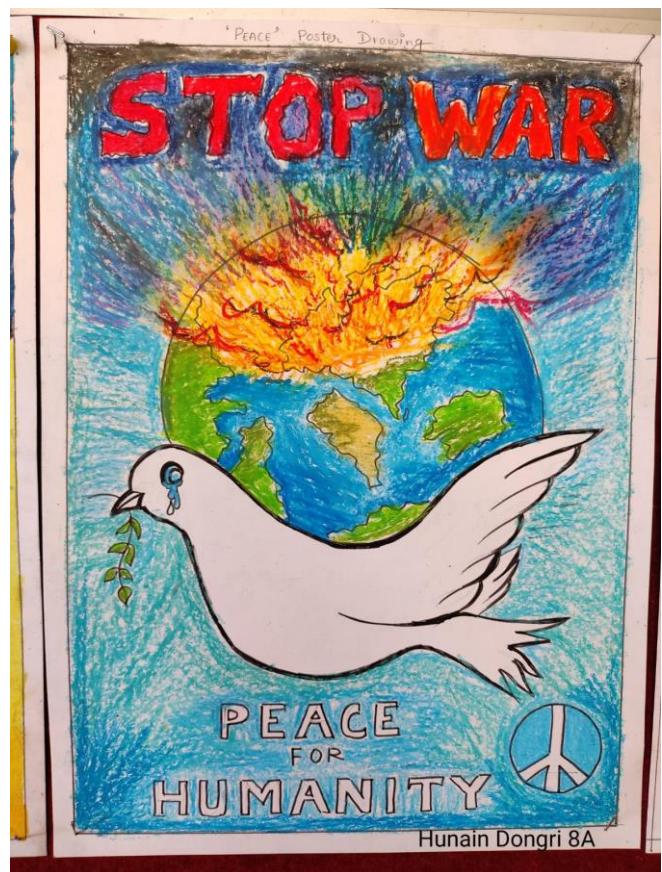

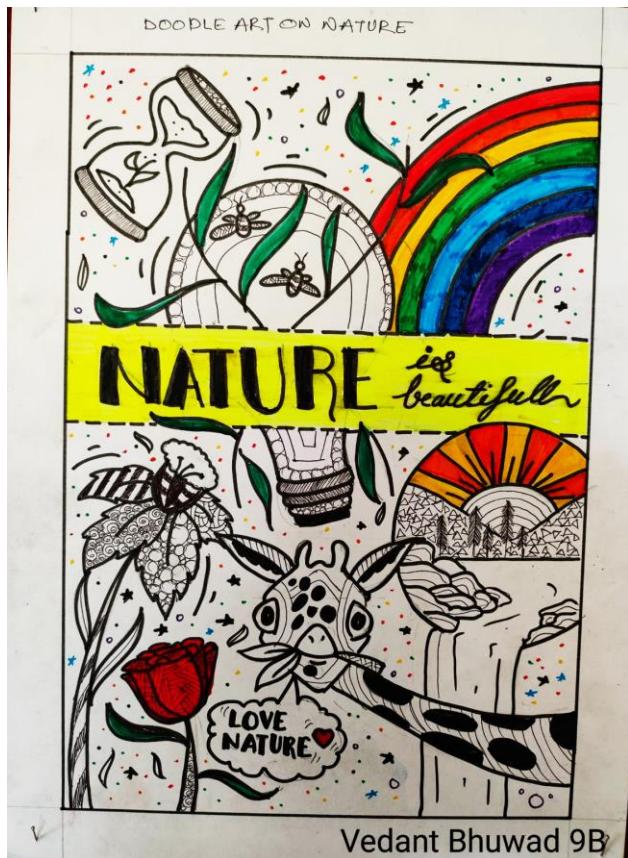

Certainly, Education is the most powerful Weapon!!!
